SUMMARY

Goal-oriented full stack software engineer specializing in front-end development. Experience building and maintaining consumer facing websites and software applications in a collaborative team environment. Committed to high standards of user experience, usability and speed for end-users.

PROFESSIONAL EXPERIENCE

Freelance Web Developer, Remote - *Full Stack Developer*

APRIL 2018 - PRESENT

- Built and managed multiple Shopify ecommerce stores.
- Customized themes and fixed front end templates in HTML, Liquid, SASS, and JavaScript.

SeedSpark, Charlotte - *Software Applications Developer*

JANUARY 2015 - APRIL 2018

- Responsible for creating a custom content management system from scratch in PHP and MySQL that powered most of our client consumer-facing websites that increased web traffic by up to 100%. It was built with the Laravel MVC framework and React.js for the front end.
- Analyzed requirements and designs, developed and implemented software applications for multiple websites using ASP.NET and SQL Server.
- Maintained existing applications, handled tickets from clients, and delivered new features using agile methodologies.

RECENT PROJECTS

Alfred - github.com/naizen/alfred

- A real-time chatbot assistant that incorporates natural language processing to handle responses to the user.
